Replication Archive for "Federal Tax Deductions and the Demand for Local Public Goods"

Brent W. Ambrose & Maxence Valentin

December 22, 2023

This document describes the structure of the replication files that reproduce all the figures and tables in “Federal Tax Deductions and the Demand for Local Public Goods”. It details the different datasets, subcodes, and computational requirements. From *"0.Main_script.R"*, all results of the paper can be replicated.

1 Data files and dictionary

The final dataset that reproduces all exhibits in the paper is located in *"Data/data_for_analysis.R"*. All the variables of the main dataset ("df" when loaded in **R**) are described in Table 1 below.

To reproduce this dataset from the raw data, the source code *"Rscripts/Create_dataset_for_analysis.R"* loads and merges these different datasets:

- *"CA_schools_final.csv"*: contains the merged and cleaned referendum results in California school districts (source: ([California Secretary of State, 2022](#))).
- *"soi_school_districts.csv"*: contains merged and cleaned panel data of SOI variables at the school district levels (source: ([SOI, 2018](#))).
- *"ACS_SchoolDistricts_2010-2021.csv"*: contains merged and cleaned American Community Survey 5-years data at the school district levels (source: [ACS](#)).
- *"mean_bond_yields_CA_schools.csv"*: contains the mean bond yields in California school districts. (source: [Mergent](#))
- *"City_referendums.csv"*: contains the merged and cleaned referendum results in California cities (source: ([California Secretary of State, 2022](#))).
- *"ACS_City_2010-2021.csv"*: contains merged and cleaned American Community Survey data at the city level – i.e. places (source: [ACS](#)).

In addition, to perform results in the Online Appendix, additional datasets (all located in "Data/Raw Data") are needed. Here is a description of the data and sources:

- *"soi_zipcode_panel_with_all_noagi.csv"*: contains merged and cleaned panel data of SOI variables at the zip code levels (source: ([SOI, 2018](#))) – used to produce Figure A1.
- *"ppic.csv"*: contains merged and cleaned survey answers from the April Public Policy Institute of California Statewide Survey (source: [PPIC](#)) – used to produce Figure A3.
- *"SLGF_2017.csv"*: contains the data from the Survey of Local Government Finances for the year 2017 (source [SLGF](#)) – used to produce Figure A7.
- *"Instructional_modes.csv"*: contains the share of instructions performed online or in-person during the school year 2020-2021 (source: ([COVID-19 School Data Hub, 2023](#))) – used to produce Table A4.
- *"land_use_school_districts_all.csv"*: contains land cover data aggregated at the school district level (source: [National Land Cover Database](#)) – used to produce Table B2.

2 Directory organization and scripts description

The folder *"Rscripts"* contains all the sub-R files to produce all the exhibits in the papers. By default, figures and tables will be saved in the folder *"Output"* with corresponding Table and Figure names. The different files are:

- *"1.Create_dataset_for_analysis.R"*: Loads and merges main data. It relies on:
 - *"2.Load_clean_referendums.R"*: Load school district referendums and clean datasets
 - *"3.merging_soi.R"*: Merges with SOI data
 - *"4.merging_acs.R"*: Merges with ACS data
 - *"5.Assemble_city_referendums.R"*: Load, merge, and clean city referendums
- *"6.sumstat.R"*: Creates Table 1 – Summary statistics
- *"7.main_result.R"*: Creates Table 2 – Average Causal Response Estimates
- *"8.school_vs_city_raw.R"*: Creates Figure 1 – Share of California Local Tax Referendums Approved
- *"9.main.parallel_trend.R"*: Creates Figure 2 – Dynamic Average Causal Responses and least wiggly path of confound. Relies on:
 - *"9bis.LWP.R"*: Search for the least wiggly path of confound
- *"10.main.elasticity.R"*: Shows the coefficient results discussed in the text of Section 4.
- *"11.figures_in_appendix.R"*: Reproduces all figures of the online appendix. Relies on:
 - *"11bis.construct_matrix_of_refdums.R"*: Construct a balanced panel of school districts with entries regarding whether they have had referendums.
- *"12.tables_in_appendix.R"*: Reproduces all tables of the online appendix. Relies on:
 - *"11bis.construct_matrix_of_refdums.R"*: Construct a panel dataset of school districts with entries regarding whether they have had referendums.

3 Version and packages

The current code runs on **R** version 4.3.1. To produce all exhibits, following packages are required:

- ggplot2
- stargazer
- DescTools
- lfe
- doParallel
- scales
- tigris
- ggthemes

Table 1: Variables in main datasets

Variable name	Description	Source
<i>LEAID</i>	Unique school district identifier	CA SOS
<i>year</i>	Year of the referendum	CA SOS
<i>date</i>	Date of the referendum	CA SOS
<i>type</i>	Type of referendums (bond, levy, property tax)	CA SOS
<i>threshold</i>	Percentage of Yes votes for referendum to be approved	CA SOS
<i>bond_amount</i>	proposed bond amount	CA SOS
<i>levy_parcel</i>	Proposed levy parcel increase	CA SOS
<i>vote_for</i>	indicator variable for passed referendums	CA SOS
<i>vote_against</i>	indicator variable for passed referendums	CA SOS
<i>vote_total</i>	indicator variable for passed referendums	CA SOS
<i>yield</i>	Mean bond yield in CA districts in the year of the referendum	Mergent
<i>cost_bond</i>	Annual interest payment: $\text{bond_amount} \times \text{yield}$	Mergent
<i>perc_yes</i>	Share of Yes votes on the referendums	CA SOS
<i>Pass</i>	indicator variable for passed referendums	CA SOS
<i>election_FE</i>	Election fixed effects (see footnote 6 in paper)	CA SOS
<i>failed_recently</i>	indicator if referendum in same school district failed in the last 4 years	CA SOS
<i>presidential_el</i>	indicator for referendums occurring during a presidential election	CA SOS
<i>midterm_el</i>	indicator for referendums occurring during a midterm election	CA SOS
<i>odd_year</i>	indicator for referendums occurring during in odd years	CA SOS
<i>Bond</i>	Indicator for bond referendums	CA SOS
<i>post</i>	indicator for referendums after 2019	CA SOS
<i>tight_election</i>	Indicator for election results within 40-90%	CA SOS
<i>one_election</i>	Indicator for school district with one referendum only	CA SOS
<i>itm_prop_perc_17</i>	Ratio of property tax deducters in 2017	SOI
<i>itm_prop_change</i>	Change in the ratio of property tax deducters between 2017 and 2018	SOI
<i>salt_amt_change_perc</i>	Percentage change in SALT deductions	SOI
<i>wasted_salt</i>	Dollar amount of SALT not deducted because of the cap	SOI
<i>wasted_salt_perc</i>	Wasted SALT over the total possible SALT deductions	SOI
<i>salt_amt_change</i>	Dollar change in SALT deductions	SOI
<i>highpropchange</i>	Chg.Ded greater than the median school district chg.Ded (0.139)	SOI
<i>avg_costLPG_weighted_AGI</i>	Weighted average cost of local public goods (see Equation 3)	SOI
<i>housing_units</i>	number of housing units	ACS
<i>population_votingage</i>	Population over 19 years old	ACS
<i>income_mean</i>	Average income in school district	ACS
<i>realestate_taxes_median</i>	Median property tax bills in the school district	ACS
<i>ownership_2017</i>	rate of home-ownership in 2017	ACS
<i>housing_units18</i>	housing units in 2018	ACS
<i>bond_ph</i>	Proposed bond amount per housing unit	
<i>turnout</i>	Total votes over the voting population	
<i>salt_change_ph</i>	salt_amt_change per housing unit	
<i>wasted_salt_ph</i>	wasted_salt per housing unit	
<i>cost_bond_ph</i>	cost_bond per housing unit	
<i>levy_increase</i>	Levy parcel proposed over current real estate taxes
